1: Introduction

Thank you for buying Pippa Funnell 3. This document contains a series of last-minute information that was not available at the time the manual went to print.

To read the manual, you will need Acrobat Reader software. You can download the software from the following Internet address: http://www.adobe.com/products/acrobat/readstep2.html

3D video card with a minimum of 64 Mb Ram (GeForce 3 or equivalent)

Recommended requirements

Windows 98/Me/2000/XP

3.5 Gb hard drive space

DVD drive

Windows compatible sound card

AMD or Intel Processor, 1.5 Ghz

512 Mb RAM

3D video card with 128 Mb Ram (GeForce 6 or equivalent)

3: Compatibility problems

DirectX 9.0 c (supplied with the CD) must be installed to make the game work correctly.

For optimum functioning, you are recommended to install the latest drivers for your graphics cards.

Some graphics cards may create display problems, particularly those using the following boards:
NVidia GeForce FX 5200
NVidia GeForce 6200
ATI Radeon X1300 Series

If problems appear, you are recommended to launch the game using the lowest graphics quality in the Options menu.

4: Known issues and troubleshooting

You are advised not to run any other program while playing Pippa Funnell 3, as this may slow down the game's display.

You may remove the game CD once the game has launched, in particular if you wish to listen to your own audio CD when the game permits. You are recommended not to reinsert the game CD afterwards, however, as this will automatically relaunch the software in the middle of your game.

You are not advised to use the Alt + F4 keys to exit the game. In Windows 98 and Windows Me this key combination can cause the application to stall.
For the same reasons, you are advised to avoid using the Alt + Tab buttons to toggle from the game to another application or desktop.

After you change the options, you may encounter error messages as you exit the game. These do not affect saved games.

5: Uninstalling the game

Watch out! When you uninstall the game, all saved games are automatically deleted.

6: Menu Options

The help messages displayed throughout the adventure refer to the default keyboard commands. The help message always refer to the default setting even if you change the keyboard key assignment in the Options menu.

In the "High + Glow" setting, the maximum screen resolution is limited to 1024/768 , even if you choose a different resolution. To play the game in a better resolution, select "High" quality.
